

Automation, Industrial electricals and Production management

As part of a new build or modernisation project, we can integrate the automation and management system for your new production shop and the wiring for all of the equipment.

We work directly with acknowledged players in the cereal industry field for wiring, automating and managing production at factories.

We can advise you and support you in the choice of a contractor.

As such, we can work with you to develop specifications for submissions from contractors so that you can make a choice that best matches your needs.
