

SETER PRESS PREPARATION

UNIT

- A preparation unit suited to continuously incorporating steam.
- Made from mild or stainless steel for flow rates of 5 to 30 tons per hour.
- With a wide access door for easy cleaning.
- Rotation speed suited to properly dispersing steam and optimised flour handling prior to sending to the press.
- Blades are anti-abrasion treated against mineral wear.
- The piping system used for incorporating the liquids is calibrated with our fluids partner to match your needs.
